3 recalls listed by Transport Canada for this model year

Brakes

2025685 11 Dec 2025

Issue: On certain vehicles, a seal in the brake master cylinder could become damaged. As a result, brake fluid could leak into the reservoir and there could be reduced braking. Safety Risk: Reduced braking can cause extended stopping distances and increase the risk of a crash. Corrective Actions: Acura will notify owners by mail and advise you to take your vehicle to a dealership to replace the brake master cylinder.

Powertrain

2019272 6 Jun 2019

Issue: On certain cars, the right axle half-shaft could detach. This could cause a loss of power to the drive wheels. Additionally, if the parking brake is not applied, this could allow the car to roll away. Safety Risk: A loss of power to the drive wheels or sudden, unexpected movement of the car could increase the risk of a crash. Corrective Actions: The company will notify owners by mail and instruct them to take their car to a dealer to inspect the right driveshaft. If the driveshaft is not fully engaged to the half-shaft, the driveshaft and half-shaft will be replaced.

Fuel system

2019034 25 Jan 2019

Issue: On certain vehicles, the bottom of the fuel tank could be deformed. This could cause the fuel gauge to display the wrong fuel level. This could cause a driver to believe there is fuel when the tank is empty. Safety Risk: The vehicle could unexpectedly run out of fuel and stall, increasing the risk of a crash. Corrective Actions: The company will notify owners by mail. Owners will be instructed to take their vehicle to a dealer for an inspection of the fuel tank. All affected fuel tanks will be replaced.
