4 recalls listed by Transport Canada for this model year

Airbag — 2016448 — 14 Sep 2016

On certain vehicles in certain types of crashes, airbag and seatbelt pretensioner deployment capability may be lost due to a short in the front impact sensor wiring affecting Occupant Restraint Controller function. Failure of airbags and seatbelt pretensioners to deploy in a crash (when warranted) could increase the risk of injury. Correction: Dealers will replace the Occupant Restraint Controller module.

Airbag — 2013195 — 7 Jun 2013

On certain vehicles, due to a software error in the occupant restraint control (ORC) module, side curtain airbag and seatbelt pretensioner deployment could be delayed or not occur in slower-developing rollover events. This could increase the risk of personal injury in a crash. Correction: Dealers will reprogram the module.

Fuel system — 2013103 — 5 Apr 2013

On certain vehicles, fuel transfer from the secondary to the primary side of the fuel tank may be interrupted, possibly resulting in engine stalling and loss of motive power. In conjunction with traffic, road conditions and driver's reactions, this could increase the risk of a crash causing property damage and/or personal injury. Correction: Dealers will install an updated fuel transfer tube.

Fuel system — 2012116 — 3 Apr 2012

On certain vehicles, the fuel tank roll-over valve may have been damaged during vehicle assembly. This could allow fuel leakage in a roll-over crash. Fuel leakage, in the presence of an ignition source, could result in a fire causing property damage and/or personal injury. Correction: Dealers will replace the fuel tank assembly.
