2 recalls listed by Transport Canada for this model year

Powertrain

2020610 10 Dec 2020

Issue: On certain vehicles, the paint on the front axle shafts could delaminate or become damaged by road debris. As a result the axle shaft could corrode. If this happens, the axle shafts could break and cause a loss of power to the wheels. Also, if this happens and the vehicle is parked without the parking brake applied, the vehicle could roll away. Safety Risk: A loss of power to the wheels or a vehicle rollaway could increase the risk of a crash. Corrective Actions: Honda will notify owners by mail and instruct you to take your vehicle to a dealer to inspect, and if necessary, replace both axle shafts.

Airbag

2016046 1 Feb 2016

On certain vehicles, the driver frontal airbag inflator could produce excessive internal pressure during airbag deployment. Increased pressure may cause the inflator to rupture, which could allow fragments to be propelled toward vehicle occupants, increasing the risk of injury. This could also damage the airbag module, which could prevent proper deployment. Failure of the airbag to fully deploy during a crash (where deployment is warranted) could increase the risk of personal injury to the seat occupant. Correction: Dealers will inspect/replace the driver's frontal airbag inflator. Note: Honda Canada has created a special Airbag Inflator Hotline for immediate assistance.
