Electrical

2014273 2 Jul 2014

On certain vehicles, there is a risk that some drivers may bump the ignition key with their knee and unintentionally move the key from out of the "run" position. If this were to occur, engine power, power braking and power steering would be affected, which would unexpectedly increase steering and brake pedal effort, potentially increasing stopping distances and the risk of a crash causing injury and/or damage to property. The timing of the key movement out of the "run" position, relative to the activation of the sensing algorithm of the crash event, may also result in the airbags not deploying in a subsequent collision, increasing the risk of injury. Correction: Dealers are to remove the key blade from the original flip key/transmitter assemblies provided with the vehicle, and provide two new keys and two key rings for every original key. Important note: Until the correction is performed, drivers should adjust their seat and steering column to allow clearance between their knee and the ignition key.

Suspension

2011064 11 Feb 2011

On certain vehicles, a wax coating applied to the rear suspension toe link jam nuts may allow the nut(s) to loosen. Should this occur, a metallic clanking noise may be heard coming from the rear of the vehicle. Ignoring this warning could result in a further loosened toe link, which could eventually separate, allowing the rear wheel to turn inboard or outboard. If this were to happen, sudden changes in vehicle handling could occur, which could result in a crash causing property damage and/or personal injury. Correction: Dealers will clean all wax residue from the rear suspension toe link and install two new jam nuts. If required, the rear suspension toe link will be replaced.
