2 recalls listed by Transport Canada for this model year

Fuel system

2022331 23 Jun 2022

Issue: On certain vehicles, the rollover valve in the fuel tank may not seal properly. As a result, fuel could leak from the tank in a rollover crash. Safety Risk: A fuel leak can create the risk of a fire. Corrective Actions: General Motors will notify owners by mail and instruct you to take your vehicle to a dealership to inspect the fuel tank. If the rollover valve is dislodged or missing, the dealer will replace the fuel tank shell.

Suspension

2022319 16 Jun 2022

Issue: On certain vehicles, a bolt for the left-rear suspension toe link may not have been properly tightened. As a result, the toe link could become loose or separate. This can cause a misalignment of the left-rear wheel and result in reduced vehicle stability. Safety Risk: Reduced vehicle stability could cause a loss of control and increase the risk of a crash. Corrective Actions: General Motors will notify owners by mail and instruct you to take your vehicle to a dealership to inspect the left-rear suspension. If the bolt for the rear toe link is loose or missing, a technician will replace it.
