2 recalls listed by Transport Canada for this model year

Other

2008363 6 Oct 2008

On certain vehicles, a varistor in the Occupant Classification System (OCS) control unit located in the passenger seat cushion may have been manufactured incorrectly. Under certain conditions, this could cause an interruption of signal between the OCS and the Airbag control unit (ACU). This could result in the passenger airbag being suppressed. The (red) supplemental airbag warning light would flash & the (amber) front passenger airbag status light would illuminate to alert the vehicle operator, however in case of a crash a suppressed airbag could result in personal injury or death. Correction: Dealers will test the signal between the OCS & ACU and if necessary will replace the seat cushion containing OCS hardware.

On certain vehicles, if a sufficiently hot object (i.e. cigarette ash) enters the air filter housing through the engine fresh air intake system, the air filter may ignite. This could result in an underhood fire causing property damage and/or personal injury. Correction: Dealers will replace the air filter with a revised version possessing improved anti-flammability characteristics. In addition, an air deflector will be installed in front of the air intake opening to reduce the intake of debris.
