Fuel system

1988091 5 Jul 1988

On certain vehicles with 2.2 Litre turbo-charged multi-port fuel injection engines, there is a possibility that fuel leakage may occur during low ambient temperature operation at the fuel hose used to interconnect the fuel pressure regulator and the injector rail. Fuel leakage would create the potential for an engine compartment fire. Correction: the pressure regulator will be relocated and the fuel supply hose will be replaced with a formed hose having a revised routing configuration.
