Certain passenger vehicles used extensively in track type racing events and subjected to aggressive driving conditions could experience cracks at the welds of the rear differential mounting bracket. The cracks could eventually lead to metal fatigue and dislodging of the differential mounting bracket from the frame of the vehicle. Separation of the differential mounting bracket could result in loss of vehicle control. Correction: All affected vehicles will have a field repair kit installed. Vehicles exhibiting cracks will require an additional weld repair prior to installation of the kit.
