2 recalls listed by Transport Canada for this model year

Electrical 2004392 2 Nov 2004

On certain vehicles subject to conditions involving extreme heat and humidity, condensation from the instrument panel air conditioning ducts may drip through the vent holes in the top of the base equipment radio and results in a short circuit that subsequently sends direct current to the rear speakers. This could result in a speaker fire. Correction: Dealers will apply a special tape to the top of the radio to eliminate the potential for water intrusion.

Steering 2004276 4 Aug 2004

On certain minivans equipped with a 3.3L or 3.8L engine, the upper power steering cooler hose could split, causing a fluid leak. Power steering fluid leakage in the presence of an ignition source can result in an underhood fire. Correction: Dealers will replace the upper power steering hose.
