3 recalls listed by Transport Canada for this model year

Label — 2024548 — 15 Aug 2024

Issue: On certain vehicles, the tire and loading information label does not list that there is no spare tire in both official languages. The label reads as "NONE" when it should read as "NONE / AUCUN". Canadian regulations require the information to be listed on the label in both English and French. Safety Risk: This error does not affect vehicle safety. Corrective Actions: This is not a recall. The company has corrected the tire and loading information label for all new vehicles.

Label — 2016447 — 13 Sep 2016

Certain vehicles may fail to comply with the requirements of Canada Motor Vehicle Safety Standard 110 - Tire Selection and Rims. The Tire and Loading Information Label may have incorrect spare tire inflation pressure of 46 psi which exceeds the maximum permissible pressure of 41 psi listed on the sidewall of the spare tire. This could result in spare tire over-inflation, increasing the risk of a crash causing injury and/or damage to property. Correction: A revised Tire and Loading Information Label will be mailed to owners along with instructions for proper installation. If owners are not comfortable installing the label themselves, they can take the label to an FCA dealer for installation.

Powertrain — 2016217 — 12 May 2016

On certain vehicles equipped with a manual transmission, clutch diaphragm springs may crack or become damaged, which could result in the driver being unable to shift gears, or potentially result in a loss of motive power. Depending on traffic conditions and the driver's reactions, these issues could increase the risk of a crash. Correction: Dealers will install a pedal travel limiter and pedal switch.
