### Fuel system

2018251 11 May 2018

Certain models equipped with a tire inflator kit may fail to comply with the requirements of Canada Motor Vehicle Safety Standard (CMVSS) 301 – Fuel System Integrity. The company's internal testing indicates that, under certain conditions in a rollover following a severe rear-impact crash, a sensor attached to the fuel tank may contact the rear floor panel, and possibly cause a fuel leak. Fuel leakage, in the presence of an ignition source, could result in a fire causing injury and/or property damage. Correction: Dealers will install a lock-ring on the fuel tank that shields the vapour pressure sensor.
