Suspension

2021394 24 Jun 2021

Issue: On certain vehicles, the adjustable rear toe link may not have been properly tightened during a previous service repair. As a result, the toe link could loosen and eventually separate. This could cause a sudden loss of vehicle stability. Note: You may notice the following warning symptoms if a rear toe link is loose: - sway or wander while driving; - loud metallic or other unusual noise from the rear suspension; - the steering wheel may be off-center; - the Stabilitrak malfunction indicator lamp (MIL) may stay on or flash while driving; - Uneven wear between the rear tires. If you detect these symptoms, you should stop driving and have the vehicle towed to the nearest dealership. Safety Risk: A loss of stability could increase the risk of a crash. Corrective Action: General Motors will notify owners by mail and instruct you to take your vehicle to a dealer to replace the adjustable rear toe links with a newly designed part.

Suspension

2014406 18 Sep 2014

On certain vehicles, the rear suspension toe link jam nuts may not have been tightened to specification. If the vehicle is operated in this condition, the toe link nuts could loosen and eventually separate, allowing the rear wheel to turn inboard or outboard. If this were to happen, sudden changes in vehicle handling could occur, which could result in a crash causing injury and/or property damage. Correction: Dealers will inspect and ensure the rear suspension toe link nuts are tightened to specification. If required, the rear suspension toe link will be replaced.
