cardog.app/tools/recalls/jeep/wrangler/2021

15 recalls listed by Transport Canada for this model year

Steering

2026271 4 Jun 2026

Issue: On certain vehicles, the connection for the electric hydraulic power steering pump (EHPSP) could become loose. If this happens, the EHPSP connection could overheat and melt. Safety Risk: Wiring that overheats and melts can create a fire risk, even while the vehicle is parked and turned off. Corrective Actions: To reduce the safety risk, FCA recommends that you should park your vehicle outside and away from other vehicles or buildings until the recall repairs are completed. FCA Canada will notify owners in writing and advise you to take your vehicle to a dealership to inspect and, if necessary, repair or replace the affected part(s).

High voltage

2025595 30 Oct 2025

Issue: On certain vehicles, the recall repairs completed by an FCA dealer during recall 95B (Transport Canada recall no. 2024-566) may not be effective. As a result, another repair is required. On certain vehicles, there could be a problem inside the high-voltage battery that can cause a fire, even while parked with the ignition off. Note: This recall only affects 4xe plug-in hybrid (PHEV) models. This recall replaces Transport Canada recall no. 2024-566. Safety Risk: The vehicle could catch fire, even while parked and turned off. Corrective Actions: To reduce the safety risk, FCA advises not to charge your vehicle, and to park it outdoors and away from other vehicles or structures until the recall repairs have been completed. FCA Canada will notify owners in writing and advise you to take your vehicle to a dealership to update the high-voltage battery pack software. If necessary, the battery pack will be replaced.

High voltage

2024566 27 Sep 2024

Issue: On certain vehicles, the recall repairs completed by an FCA dealer during recall B9A (Transport Canada recall no. 2023-627) may not be effective. As a result, a second repair is required. On certain vehicles, there could be a problem inside the high-voltage battery that can cause a fire, even while parked with the ignition off. Note: This recall only affects 4xe plug-in hybrid (PHEV) models. This recall replaces Transport Canada recall no. 2023-627. Safety Risk: The vehicle could catch fire, even while parked and turned off. Corrective Actions: To reduce the safety risk, FCA advises not to charge your vehicle, and to park it outdoors and away from other vehicles or structures until the recall repairs have been completed. FCA Canada will notify owners by mail and advise you to take your vehicle to a dealership to update the high-voltage battery pack software. If necessary, the battery pack will be replaced.

Heater and defroster

2024098 15 Feb 2024

Issue: On certain vehicles, a software problem could cause the windshield defrost system not to work properly. As a result, the vehicles don't meet the requirements of Canadian regulations. Note: This recall only affects plug-in hybrid (PHEV) models. Safety Risk: A windshield defroster that doesn't work may cause reduced visibility and increase the risk of a crash. Corrective Actions: FCA Canada will notify owners by mail and advise you to take your vehicle to a dealership to update the hybrid control processor (HCP) software.

High voltage

2023627 22 Nov 2023

Issue: On certain Wrangler 4xe plug-in hybrid electric vehicles (PHEV), there could be a problem inside the high-voltage battery that can cause a fire, even while parked with the ignition off. Safety Risk: The vehicle could catch fire, even while parked and turned off. Corrective Actions: FCA Canada will notify owners by mail and advise you to take your vehicle to a dealership to update the high-voltage battery pack software. If necessary, the battery pack will be replaced. FCA advises not to charge your vehicle, and to park it outdoors and away from other vehicles or structures until the recall repairs have been completed.

Fuel system

2023218 13 Apr 2023

Issue: On certain vehicles equipped with a 3.0 L diesel engine, the high-pressure fuel pump could fail. If this happens, you may notice a change in engine performance, a fuel leak, or a malfunction indicator lamp and/or service electronic throttle control tell-tale may turn on. This could also result in a sudden loss of engine power while driving. Safety Risk: A sudden loss of engine power could increase the risk of a crash. Corrective Actions: FCA Canada will notify owners by mail and instruct you to take your vehicle to a dealership to replace the high-pressure fuel pump. Additional fuel system parts may be replaced, if necessary.

SOURCES

[1] Cardog identity register, decoded from the VIN	[4] Cardog market quote, same configuration, 25 live listings, as of 29 Oct 2026
[2] Transport Canada recall database, listed for the model year	[5] Live public dealer listings on Cardog, as of 29 Oct 2026
[3] NHTSA recall records (United States), listed for the model year	[6] Window sticker, issued by STELLANTIS, collected 14 Sep 2026

STATEMENT OF SCOPE

This record is what public sources held about this vehicle when Cardog read it, each fact cited to its source. It read the VIN decode, Transport Canada's recall listing, NHTSA's recall records, Cardog's market quote, live public dealer listings and the window sticker. Recalls are listed for the model year, not checked against this VIN; the manufacturer confirms which apply. It is not a vehicle history or ownership report, and it carries no owner information.
