3 recalls listed by Transport Canada for this model year

Electrical

2023210 6 Apr 2023

Issue: On certain vehicles, an unused wiring harness for a rear HVAC blower motor, located in the left B-pillar area, could become damaged if exposed to moisture or contaminants. If this happens, the wires could short circuit. Note: This recall only affects cutaway chassis incomplete vehicles. Safety Risk: A short circuit can create the risk of a fire. Corrective Actions: General Motors will notify owners by mail and instruct you to bring your vehicle to a dealership to seal the wiring for the rear HVAC blower motor at the left B-pillar.

Other

2020479 7 Oct 2020

Issue: Certain vehicles may have incorrect body control module software. As a result, the immobilization system is not active during the learning procedure for a new "unlearned" blank replacement key could be used during a 30 minute reprogramming procedure to disable the immobilization system. During this time, the vehicle cannot be driven. Safety Risk: This small error does not affect vehicle safety. Corrective Actions: This is not a recall. General Motors has made changes to vehicle software to ensure that all unsold and new vehicles have the correct body control module software.

Electrical

2018234 4 May 2018

On certain vehicles equipped with power windows, liquid can enter the power window switches causing corrosion and lead to a high electrical resistance. This could cause the switch to heat up, smoke or melt, which would increase the risk of fire causing injury and/or damage to property. Correction: Dealers will replace the driver's side window switch with a switch that has additional protection against liquid intrusion.
