2 recalls listed by Transport Canada for this model year

Fabrics

2021146 12 Mar 2021

Issue: Under certain testing conditions, the front seat material may not meet the flammability requirements of Canadian regulations. However, when the seat mat is tested in a fully assembled state, with all four layers, it meets all requirements. Safety Risk: This is a testing issue that does not affect vehicle safety. Corrective Actions: This is not a recall. The company has made changes to ensure that all new vehicles have fully compliant seat-vent mats.

Brakes

2016542 3 Nov 2016

On certain vehicles, the front brake calipers may have a torn or extruded caliper piston seal. This could result in a loss of hydraulic brake fluid, which could decrease braking performance and extended stopping distances, increasing the risk of a crash causing injury and/or damage to property. Correction: Dealers will inspect the date codes of the right and left front caliper assemblies and check for signs of leaking brake fluid. If the date code falls within the affected range, the dealer will replace the brake caliper assembly. If there are signs of brake fluid leakage, the dealer will also replace the disc brake pads. Note: A red "BRAKE" telltale light will illuminate when approximately 72% of the brake hydraulic fluid has leaked from the brake master cylinder reservoir.

STATEMENT OF SCOPE

This record is what public sources held about this vehicle when Cardog read it, each fact cited to its source. It read the VIN decode, Transport Canada's recall listing, NHTSA's recall records, Cardog's market quote and live public dealer listings. Recalls are listed for the model year, not checked against this VIN; the manufacturer confirms which apply. It is not a vehicle history or ownership report, and it carries no owner information.
