3 recalls listed by Transport Canada for this model year

Powertrain

2026224 7 May 2026

Issue: On certain vehicles, the power transfer unit (PTU) could become damaged and fail. If this happens, there could be a loss of power to the wheels and/or the vehicle could move when it's parked and the parking brake isn't applied. Note: This recall only affects certain vehicles equipped with a two-speed PTU. Safety Risk: A loss of power to the wheels or a parked vehicle that moves suddenly could create the risk of an injury and/or a crash. Corrective Actions: FCA Canada will notify owners in writing. The corrective actions for this recall are under development.

Label

2024548 15 Aug 2024

Issue: On certain vehicles, the tire and loading information label does not list that there is no spare tire in both official languages. The label reads as "NONE" when it should read as "NONE / AUCUN". Canadian regulations require the information to be listed on the label in both English and French. Safety Risk: This error does not affect vehicle safety. Corrective Actions: This is not a recall. The company has corrected the tire and loading information label for all new vehicles.

Powertrain

2021263 4 May 2021

Issue: On certain vehicles, the transmission oil cooler hose may not have been manufactured correctly. As a result, the hose could burst and leak transmission fluid. Safety Risk: A transmission fluid leak could create the risk of fire. Corrective Actions: Fiat Chrysler Automobiles (FCA) will notify owners by mail and instruct you to take your vehicle to a dealer to inspect the transmission oil cooler hoses. The hoses will be replaced, if necessary.
