3 recalls listed by Transport Canada for this model year

Powertrain

2026224 7 May 2026

Issue: On certain vehicles, the power transfer unit (PTU) could become damaged and fail. If this happens, there could be a loss of power to the wheels and/or the vehicle could move when it's parked and the parking brake isn't applied. Note: This recall only affects certain vehicles equipped with a two-speed PTU. Safety Risk: A loss of power to the wheels or a parked vehicle that moves suddenly could create the risk of an injury and/or a crash. Corrective Actions: FCA Canada will notify owners in writing. The corrective actions for this recall are under development.

Lights and instruments

2024199 28 Mar 2024

Issue: On certain vehicles, a problem with the steering column control module could cause the turn signal lever not to work properly when it's used to signal a right turn. Safety Risk: A turn signal that doesn't work properly could cause a person not to recognize when a driver intends to turn or change lanes and increase the risk of a crash. Corrective Actions: FCA Canada will notify owners by mail and advise you to take your vehicle to a dealership to inspect and, if necessary, replace the steering column control module.

Lights and instruments

2022409 28 Jul 2022

Issue: On certain vehicles with the trailer tow option, a programming error in the body control module (BCM) could cause the trailer brake lamps and turn signals not to work. Safety Risk: Trailer lights that don't work could cause following drivers not to recognize that the vehicle ahead is braking or intends to turn. This could increase the risk of a crash. Corrective Actions: FCA Canada will notify owners by mail and instruct you to take your vehicle to a dealership to reconfigure the body control module to include the trailer tow option.
