cardog.app/tools/recalls/volkswagen/atlas/2023

4 recalls listed by Transport Canada for this model year

Suspension — 2025355 — 25 Jun 2025

Issue: On certain vehicles, certain bolt(s) on the chassis, brake system and/or suspension may not have been tightened properly. As a result, the bolt(s) could loosen and cause a loss of control. Safety Risk: A loss of control could increase the risk of a crash. Corrective Actions: Volkswagen will notify owners by mail and advise you to take your vehicle to a dealership to replace the affected bolt(s) on the chassis, brake system and/or suspension.

Airbag — 2024354 — 19 Jun 2024

Issue: On certain vehicles, the passenger occupant detection system (PODS) may malfunction. This could cause the airbag system to turn off the passenger-front airbag even when a passenger is seated. Note: This problem would cause an error message to display on the instrument panel and a warning chime to sound. The airbag indicator light would also display "passenger airbag off". Safety Risk: An airbag that is turned off could increase the risk of injury to a passenger in a crash. Corrective Actions: Volkswagen will notify owners by mail and advise you to take your vehicle to a dealership to replace the PODS sensor mat and seat harness. Volkswagen advises that you shouldn't use the front passenger seat if a PODS error message displays on the instrument panel or if the airbag indicator light displays "passenger airbag off" with an occupant in the seat.

Suspension — 2022612 — 26 Oct 2022

Issue: On certain vehicles, the bolts for the left-rear trailing arm may not have been properly tightened. As a result, the bolts may loosen over time and fall out. If this happens, the trailing arm may break and cause a sudden loss of vehicle control. Safety Risk: A loss of control could create the risk of a crash. Corrective Actions: Volkswagen will notify owners by mail and instruct you to take your vehicle to a dealership to replace the left-rear trailing arm bolts.

Engine

2022576 7 Oct 2022

Issue: On certain vehicles, the connecting rod bearings may become damaged. If this happens, the engine could make abnormal noises and a warning light may turn on. If you continue to drive the vehicle with these symptoms, the engine could fail and/or an oil leak could occur. Safety Risk: An engine failure can cause a sudden loss of power, which could increase the risk of a crash. An oil leak could create the risk of a vehicle fire. Corrective actions: Volkswagen will notify owners by mail and instruct you to take your vehicle to a dealership for an engine inspection test. The engine will be replaced, if necessary.

> Listed for the model year, not checked against your VIN. Volkswagen confirms which apply.

SOURCES

[1] Cardog identity register, decoded from the VIN

[2] Transport Canada recall database, listed for the model year

[3] NHTSA recall records (United States), listed for the model year

[4] Cardog market quote, same configuration, 29 live listings, as of 28 Oct 2026

[5] Live public dealer listings on Cardog, as of 28 Oct 2026

STATEMENT OF SCOPE

This record is what public sources held about this vehicle when Cardog read it, each fact cited to its source. It read the VIN decode, Transport Canada's recall listing, NHTSA's recall records, Cardog's market quote and live public dealer listings. Recalls are listed for the model year, not checked against this VIN; the manufacturer confirms which apply. It is not a vehicle history or ownership report, and it carries no owner information.
