Seats and restraints

2017073 13 Feb 2017

On certain vehicles, the push nuts and/or the lifter link which adjusts the height of the driver seat could be of insufficient strength and could become broken or detach from the seat frame. If this occurs, the seat height and inclination position would change rapidly, which could increase the risk of a crash causing injury and/or damage to property. Correction: Dealers will inspect the condition of the driver's seat lifter link. If no cracks are detected, a reinforcement bracket will be added to the lifter links, and the number of push nuts will be increased to two per seat lifter link. If any cracks are detected, dealers will replace the entire seat adjuster unit with a modified part.

Structure

On certain vehicles, the anti-corrosion treatment of the outer tube of the rear lift gate stay may be insufficient. Over time, the outer tube of the rear lift gate stay may corrode and break off, which could increase the risk of injury. Correction: Dealers will replace both rear door stays.
