2 recalls listed by Transport Canada for this model year

Airbag

2018523 27 Sep 2018

On certain vehicles, long-term exposure to high absolute humidity and temperature, combined with high temperature cycling, could eventually degrade the propellant contained in the passenger frontal airbag. This could cause the airbag to deploy with more force than normal. As a result, if the vehicle were involved in a collision that warrants airbag deployment, fragments could be propelled toward vehicle occupants, and the airbag assembly could be damaged, preventing proper function. These issues could increase the risk of injury. Correction: Dealers will replace the passenger frontal airbag inflator.

Fuel system

2011116 15 Mar 2011

On certain vehicles, the case which houses the Roll-Over Valve (ROV) within the fuel pump module may have been manufactured incorrectly. As a result the case may break or crack, which could allow the ROV to separate, thereby increasing the risk of fuel leakage in a roll-over crash. Fuel leakage, in the presence of an ignition source, could result in a fire causing property damage and/or personal injury. Correction: Dealers will inspect and, if necessary, replace the fuel pump module assembly.
