4 recalls listed by Transport Canada for this model year

Structure

2022320 16 Jun 2022

Issue: On certain vehicles, the rear frame could rust where the fuel tank and rear subframe are mounted. If this happens, the fuel tank and/or rear subframe mounts could separate from the frame. This can allow the fuel tank to fall and become damaged, which could cause a fuel leak. Safety Risk: A fuel leak can create the risk of a fire. Corrective Actions: Honda will notify owners by mail and instruct you to take your vehicle to a dealership to inspect the rear frame for corrosion. Depending on the outcome of the inspection, the dealer will either apply corrosion protection and install a support brace, or repair the frame. Honda will offer to repurchase vehicles that do not pass the inspection.

Airbag

2017009 10 Jan 2017

On certain vehicles, long-term exposure to high absolute humidity and temperature, combined with high temperature cycling, could eventually degrade the propellant contained in the passenger frontal airbag inflator. This could cause the airbag to deploy with more force than normal. As a result, if the vehicle were involved in a collision that warrants airbag deployment, fragments could be propelled toward vehicle occupants, and the airbag assembly could be damaged, preventing proper function. These issues could increase the risk of injury. Correction: Dealers will replace the passenger frontal airbag inflator. Note: Canadian climate results in the propellant degrading slowly. The recall is being conducted as a precaution to address future risk, and is expected to replace airbag inflators before their function would be affected.

Airbag

2016046 1 Feb 2016

On certain vehicles, the driver frontal airbag inflator could produce excessive internal pressure during airbag deployment. Increased pressure may cause the inflator to rupture, which could allow fragments to be propelled toward vehicle occupants, increasing the risk of injury. This could also damage the airbag module, which could prevent proper deployment. Failure of the airbag to fully deploy during a crash (where deployment is warranted) could increase the risk of personal injury to the seat occupant. Correction: Dealers will inspect/replace the driver's frontal airbag inflator. Note: Honda Canada has created a special Airbag Inflator Hotline for immediate assistance. For more information, please contact: For Honda Owners: 1-877-445-7754 For Acura Owners: 1-877-445-9844

Other

2010018 26 Jan 2010

On certain vehicles, a wiring harness connector for the heating, ventilation and air conditioning blower motor located under the passenger's side of the instrument panel may be subject to kicking by the front seat passenger's feet. If this occurs, the connector terminal may overheat, and this may cause the wire insulation to melt or the wiring connector to melt. A fire may occur if the wiring insulation melts and the exposed wires make contact with each other and create a short circuit. Correction: Dealers will replace damaged connectors and install a protective cover.

SOURCES

[1] Cardog identity register, decoded from the VIN

[2] Transport Canada recall database, listed for the model year

[3] NHTSA recall records (United States), listed for the model year

[4] Cardog market quote, same model year, 2 live listings, as of 24 Nov 2026

[5] Live public dealer listings on Cardog, as of 24 Nov 2026

STATEMENT OF SCOPE

This record is what public sources held about this vehicle when Cardog read it, each fact cited to its source. It read the VIN decode, Transport Canada's recall listing, NHTSA's recall records, Cardog's market quote and live public dealer listings. Recalls are listed for the model year, not checked against this VIN; the manufacturer confirms which apply. It is not a vehicle history or ownership report, and it carries no owner information.
