2 recalls listed by Transport Canada for this model year

Powertrain

2020536 11 Nov 2020

Issue: On certain vehicles, the front link shaft (intermediate shaft) bracket can break. If this happens, there could be a loss of power to the wheels. Also, if this happens and the vehicle is parked without the parking brake applied, the vehicle could roll away. Safety Risk: A loss of power to the wheels or a vehicle rollaway could increase the risk of a crash. Corrective Actions: The company will notify owners by mail and instruct you to take your vehicle to a dealer to replace the front link shaft bracket.

Powertrain

2014280 3 Jul 2014

On certain vehicles, the right-side halfshaft retention clip may not have been fully engaged, and could allow the halfshaft to separate. If this were to occur while the vehicle is being driven, it could result in a loss of motive power. If this were to occur while the vehicle is parked on an incline without the parking brake applied, it could result in unintended vehicle movement. Both situations could increase the risk of a crash causing injury and/or property damage. Correction: Dealers will inspect halfshafts for full retention and affect repairs as necessary.
