2 recalls listed by Transport Canada for this model year

Brakes

2023132 14 Mar 2023

Issue: On certain vehicles, the front brake hoses could fail and cause a progressive brake fluid leak. If this happens, the driver may experience a change in brake pedal feel and travel. This can cause reduced braking. Note: A brake fluid leak would cause the brake warning light to turn on. This recall doesn't affect models with a Hybrid engine. Vehicles repaired under Ford warranty extension program 22N02 already have updated brake hoses, and don't require this repair. Safety Risk: Reduced braking can cause an extended stopping distance and increase the risk of a crash. Corrective Actions: Ford will notify owners by mail and instruct you to take your vehicle to a dealership to replace the front brake hoses.

Steering

2018130 14 Mar 2018

On certain vehicles, the steering wheel bolt torque retention feature may not fully engage into the steering shaft. If the bolt loosens, the steering wheel may appear to be loose, which could affect vehicle control. If a loose bolt is left unrepaired, the steering wheel may detach from the steering column, which could result in a loss of steering control, increasing the risk of a crash causing injury and/or damage to property. Correction: Dealers will replace the steering wheel bolt with a longer bolt.

STATEMENT OF SCOPE

This record is what public sources held about this vehicle when Cardog read it, each fact cited to its source. It read the VIN decode, Transport Canada's recall listing, NHTSA's recall records, Cardog's market quote and live public dealer listings. Recalls are listed for the model year, not checked against this VIN; the manufacturer confirms which apply. It is not a vehicle history or ownership report, and it carries no owner information.
