3 recalls listed by Transport Canada for this model year

Powertrain

2020520 29 Oct 2020

Issue: On certain vehicles, the start-stop accumulator in the transmission may be missing bolts. As a result, transmission fluid could leak and eventually cause the transmission to stop working. If this happens, there could be a loss of power to the wheels. Safety Risk: A transmission fluid leak onto a hot surface can create the risk of a fire. Additionally, a loss of power to the wheels could increase the risk of a crash. Corrective Actions: General Motors will notify owners by mail and instruct you to take your vehicle to a dealer to inspect the transmission start-stop accumulator. It will be replaced if any bolts are found missing.

Seats and restraints

2019120 7 Mar 2019

Issue: On certain vehicles, the head-restraint bracket of the rear-right seat may be not be properly welded. This could allow the head-restraint to move in a crash. Safety Risk: A head-restraint that does not stay in place during a crash could create an increased risk of injury. Corrective Actions: The company will notify owners by mail. Owners will be instructed to take their vehicle to a dealer to have the rear-right seatback frame replaced.

Brakes

2018461 30 Aug 2018

On certain vehicles, a problem with the rear brake system may cause gas bubbles to form in the brake fluid. This could cause a soft brake pedal feel and a reduction in brake performance, increasing the risk of a crash causing injury and/or damage to property. Correction: Dealers will bleed the rear brakes.
