3 recalls listed by Transport Canada for this model year

Label

2023068 15 Feb 2023

Issue: On certain vehicles equipped with 21" wheels, the compliance label lists a gross axle weight rating (GAWR) for the rear axle that's too high. The label should list the rear axle capacity as 1770 kg (3902 lb.). This could lead you to overload the vehicle. Safety Risk: Overloading the vehicle could increase the risk of a crash. Corrective Actions: Audi will notify owners by mail and instruct you to take your vehicle to a dealership to install a label with the correct rear axle GAWR.

Fuel system

2017243 4 May 2017

On certain vehicles, the fuel pump flange may develop fine cracks or fissures, which could result in a fuel leak. Leaking fuel, in the presence of an ignition source, could lead to a fire causing injury and/or damage to property. Correction: Dealers will apply a butyl protective film to the fuel pump flange. If cracks are present, the fuel pump flange will be replaced. Note: This is an expansion of recall 2016-443.

Brakes

2014366 26 Aug 2014

On certain vehicles equipped with a 3.0L TDI engine, a contaminated check valve may allow engine oil to enter the brake booster. Over time, this could degrade the brake booster diaphragm and cause it to rupture, affecting power assist brake performance and potentially causing a complete loss of power assist, resulting in increased brake pedal effort. An unexpected increase in pedal effort could increase the risk of a crash causing property damage and/or personal injury the risk of a crash. Correction: Dealers will inspect the brake booster system for oil contamination and replace a vacuum line, as necessary.
