3 recalls listed by Transport Canada for this model year

Airbag

2018523 27 Sep 2018

On certain vehicles, long-term exposure to high absolute humidity and temperature, combined with high temperature cycling, could eventually degrade the propellant contained in the passenger frontal airbag. This could cause the airbag to deploy with more force than normal. As a result, if the vehicle were involved in a collision that warrants airbag deployment, fragments could be propelled toward vehicle occupants, and the airbag assembly could be damaged, preventing proper function. These issues could increase the risk of injury. Correction: Dealers will replace the passenger frontal airbag inflator.

Airbag

2013018 18 Jan 2013

On certain vehicles, the airbag cover may not have been adequately secured to the driver's airbag module. As a result, the airbag may deploy with an irregular shape, or the cover may detach during deployment. Failure of the airbag to deploy in the designed manner during a crash (where deployment is warranted) could increase the risk of personal injury to the seat occupant. Correction: Dealers will inspect and, if necessary, replace the driver's airbag module.

Fuel system

2012060 16 Feb 2012

On certain vehicles, the vent shut-float valve case (a component of the on-board vapour recovery system located inside the fuel tank) may have been incorrectly manufactured and could fail. This could allow fuel leakage from the tank which, in the presence of an ignition source, could result in a fire causing property damage and/or personal injury. Correction: Dealers will inspect and, if necessary, replace the fuel tank assembly.
