3 recalls listed by Transport Canada for this model year

Fuel system — 2019080 — 22 Feb 2019

Issue: On certain vehicles, the fuel tank could be punctured in a crash. Safety Risk: Leaking fuel, in the presence of an ignition source, creates the risk of a fire. Corrective Actions: The company will notify owners by mail. Owners will be instructed to take their vehicle to a dealer to have additional rivets installed on the lower crash beam.

Structure — 2017110 — 2 Mar 2017

On certain vehicles, the windshield may not have been properly bonded to the car body. This could allow the glass panel to separate from the vehicle in the event of a crash which would increase the risk of injury to the occupants. Correction: Dealers will re-bond the windshield to the car body.

Fuel system — 2017041 — 25 Jan 2017

On certain vehicles and replacement engines, the fastening screws for the fuel collection pipes could shear off due to stress corrosion cracking. If this occurs, fuel could leak into the engine compartment which, in the presence of an ignition source, could result in a fire causing injury and/or damage to property. Correction: Dealers will replace the fastening screws of each of the collection pipes with new and improved screws.
