3 recalls listed by Transport Canada for this model year

Fuel system — 2014449 — 9 Oct 2014

On certain vehicles equipped with 6.7L diesel engines, an electrical connection at the fuel heater could overheat, potentially rendering the heater inoperative and causing a fuel leak and fuel odour. Fuel leakage, in the presence of an ignition source, could result in a fire causing injury and/or damage to property. Correction: Dealers will inspect the fuel heater, and replace it if required, as well as replace the fuel heater wiring harness electrical connector.

Steering — 2013397 — 7 Nov 2013

On certain 2008-2012 Ram 2500 and 3500 4x4, Ram 3500 cab chassis, and 2008 Ram 1500 Mega Cab 4x4 vehicles, the left outer tie rod ball stud could fracture, potentially resulting in a loss of vehicle control and a crash causing injury and/or property damage. Correction: Dealers will install a redesigned left outer tie rod assembly. Note: This recall supersedes recall 2011-253 (L16). Vehicles that were repaired under the previous campaign will also need to be repaired under this campaign.

Steering — 2013396 — 7 Nov 2013

Certain Ram 4500 and 5500 four wheel drive vehicles may experience a fracture of the ball stud on the left outer tie rod assembly, potentially resulting in a loss of vehicle control and a crash causing injury and/or property damage. Correction: As an interim repair, dealers will align the left tie rod end. Dealers will install a redesigned left outer tie rod assembly once parts are available. Note: This recall supersedes recall 2010-465 (K28). Vehicles that were repaired under the previous campaign will also need to be repaired under this campaign.
