3 recalls listed by Transport Canada for this model year

Airbag

2018030 15 Jan 2018

On certain vehicles, long-term exposure to high absolute humidity and temperature, combined with high temperature cycling, could eventually degrade the propellant contained in the passenger frontal airbag. This could cause the airbag to deploy with more force than normal. As a result, if the vehicle were involved in a collision that warrants airbag deployment, fragments could be propelled toward vehicle occupants, and the airbag assembly could be damaged, preventing proper function. These issues could increase the risk of injury. Correction: Dealers will replace the passenger frontal airbag inflator. Note: Canadian climate results in the propellant degrading slowly. The recall is being conducted as a precaution to address future risk, and is expected to replace airbag inflators before their function would be affected. Note: This recall supersedes recall 2017-012. Vehicles completed under the previous 2017-012 recall require repair under this recall, as the previous recall remedy was an interim repair. Interim repair parts must be replaced with final repair parts.

Suspension 2016394 10 Aug 2016

On certain vehicles, the front suspension ball joint could separate from the lower control arm due to corrosion caused by saltwater intrusion. This could result in a loss of steering control, increasing the risk of a crash causing injury and/or damage to property. Correction: Dealers will replace lower control arm with an updated version.
