Trim	Titanium	Maker	FORD MOTOR COMPANY
Body	Hatchback	Plant	Wayne, Michigan, United States

§2 OBLIGATIONS [2]

cardog.app/tools/recalls/ford/focus/2016

11 recalls listed by Transport Canada for this model year

Fuel system

2026338 14 Jul 2026

Issue: On certain vehicles the recall repairs completed by a Ford dealer during recall 18S32 (Transport Canada recall no. 2018-577) may not have been done correctly. As a result, a another repair is required. On certain vehicles, the canister purge valve (CPV) may stick open and cause the fuel tank to deform. If this happens, the fuel gauge could read incorrectly and there could be a loss of power to the wheels. Note: This recall is an expansion of Transport Canada recall no. 2018-577. Vehicles repaired under that recall also require this repair. Safety Risk: A sudden loss of power to the wheels could increase the risk of a crash. Corrective Actions: Ford will notify owners by mail and advise you to take your vehicle to a dealership to update the powertrain control module (PCM) software and, if necessary, replace the CPV. If the CPV is replaced, the dealer will inspect and replace the carbon canister, fuel tank and fuel delivery module, as necessary. In the interim, owners are advised to maintain at least 1/2 tank of fuel until the recall repair is performed.

Powertrain

2026281 9 Jun 2026

Issue: On certain vehicles, the recall repairs completed by a Ford dealer during recall 18S07 (Transport Canada recall no. 2018-129) may not have been done correctly. As a result, a second repair is required. Note: This recall only affects vehicles equipped with a 1.0 L or 1.6 L engine and a manual transmission. On certain vehicles, repeated clutch slipping could cause the pressure plate to fracture. If this happens, transmission fluid could leak onto hot components in the engine compartment. Safety Risk: Oil that leaks onto hot components can create the risk of a fire. Additionally, an oil leak could create a hazard for others and increase the risk of a crash. Corrective Actions: Ford will notify owners by mail and advise you to take your vehicle to a dealership to update the system software to detect and prevent prolonged clutch slip.

Electrical

2026005 9 Jan 2026

Issue: On certain vehicles, the engine block heater could leak coolant. If this happens, the block heater could short circuit when it's plugged in.

Note: This recall replaces Transport Canada recall no. 2025-554. Vehicles that were repaired under that recall don't require this repair.

Safety Risk: A short circuit can create the risk of a fire. Corrective Actions: To reduce the safety risk, Ford advises you not to use the engine block heater until the recall repairs have been completed. Ford will notify owners by mail and advise you to take your vehicle to a dealership to replace the block heater. Alternatively, owners can choose to have the dealership permanently disable the engine block heater.

Electrical

2026004 9 Jan 2026

Issue: On certain vehicles, the engine block heater could leak coolant. If this happens, the block heater could short circuit when it's plugged in.

Note: This recall only affects certain vehicles equipped with a 2.0 L engine. Safety Risk: A short circuit can create the risk of a fire. Corrective

Actions: To reduce the safety risk, Ford advises you not to use the engine block heater until the recall repairs have been completed. Ford will notify owners by mail and advise you to take your vehicle to a dealership to replace the block heater. Alternatively, owners can choose to have the dealership permanently disable the engine block heater.

Engine

2023704 22 Dec 2023

Issue: On certain vehicles, the engine oil pump tensioner and/or the engine oil pump drive belt could fail and cause a loss of engine oil pressure. If this happens, the engine could fail and cause a loss of power to the wheels and a loss of power braking assist. Note: This recall only affects vehicles equipped with a 1.0L engine. Safety Risk: A sudden loss of power to the wheels could increase the risk of a crash. A loss of power brakes can cause an increase in brake pedal force and lead to an increase in stopping distance. Corrective Actions: Ford will notify owners by mail and advise you to take your vehicle to a dealership to inspect and, if necessary, replace the oil pump drive belt tensioner assembly. The dealer will also replace the oil pump drive belt.

Powertrain

2018665 3 Dec 2018

On certain vehicles equipped with a 1.0 L GTDI engine and 6-speed manual transmission, repeated high energy clutch slip can lead to premature clutch lining wear, reducing the mechanical properties of pressure plate material. Prolonged use, with a slipping clutch, could result in pressure plate fracture, which could cause breach of the clutch cover and transmission housing, potentially leading to a transmission fluid leak. A transmission fluid leak, in the presence of an ignition source, could increase the risk of a fire. Correction: Dealers will evaluate the clutch for wear and replace as needed and will install updated software that will detect and prevent prolonged clutch slip. Note: This is an expansion of recall 2018-129.

SOURCES

- | | |
|---|---|
| [1] Cardog identity register, decoded from the VIN | [4] Cardog market quote, same model year, 17 live listings, as of 27 Oct 2026 |
| [2] Transport Canada recall database, listed for the model year | |
| [3] NHTSA recall records (United States), listed for the model year | [5] Live public dealer listings on Cardog, as of 27 Oct 2026 |

STATEMENT OF SCOPE

This record is what public sources held about this vehicle when Cardog read it, each fact cited to its source. It read the VIN decode, Transport Canada's recall listing, NHTSA's recall records, Cardog's market quote and live public dealer listings. Recalls are listed for the model year, not checked against this VIN; the manufacturer confirms which apply. It is not a vehicle history or ownership report, and it carries no owner information.
