3 recalls listed by Transport Canada for this model year

Airbag

2026292 12 Jun 2026

Issue: On certain vehicles, the connector for the driver-front airbag in the steering wheel could corrode. As a result, the driver-front airbag may not inflate in a crash. Note: This problem would cause the airbag warning light to turn on. Safety Risk: An airbag that doesn't work properly could increase the risk of injury in a crash. Corrective Actions: Land Rover will notify owners by mail and advise you to take your vehicle to a dealership to apply grease to the driver's airbag connector terminals.

Accessories

2024739 5 Dec 2024

Issue: This recall is for raised air intakes installed on new vehicles or sold as a dealer accessory. On certain vehicles, the raised air intake may not have been attached properly. As a result, the raised air intake could loosen and detach while driving. Safety Risk: A raised air intake that detaches from the vehicle could create a road hazard for others and increase the risk of a crash. Corrective Actions: Land Rover will notify owners in writing and advise you to take your vehicle to a dealership to secure the raised air intake.

Engine

2024599 10 Oct 2024

Issue: This recall is for certain replacement engines. The oil filter housing may not have been manufactured properly. Over time, the housing could crack and cause oil to leak onto hot components in the engine compartment. Safety Risk: Oil that leaks onto hot components can create the risk of a fire. Additionally, an oil leak could create a hazard for others and increase the risk of a crash. Corrective Actions: None of the affected engines have been installed in vehicles. Land Rover will instruct dealers to replace the oil filter housing assembly before each engine is installed.
