§2 OBLIGATIONS [2]

cardog.app/tools/recalls/ford/escape/2008

3 recalls listed by Transport Canada for this model year

Powertrain

2015438 29 Sep 2015

A safety defect may exist in vehicles in which remanufactured automatic transmissions were installed as service replacement parts. The shift lever bolt may not have been torqued to the proper torque specification. If the improperly torqued shift level bolt loosens and backs out, the shift lever may disengage from the transmission without warning, and the transmission may not respond to the shifter selection movement by the operator. This could result in the loss of transmission gear selection, and possible unintended vehicle movement, which would increase the risk of a crash causing injury and/or property damage. Correction: Dealers will inspect, and if necessary, replace the shift lever assembly and/or the shift level bolt torqued to the proper specification.

Engine

2014374 4 Sep 2014

On certain hybrid vehicles, the motor electronics coolant pump may wear out and fail, resulting in a loss of coolant flow and high temperature condition within the motor electronics system. This could result in a partial or full loss of motive power, resulting in a sudden stall-like condition while driving. An engine stall without warning while driving could increase the risk of a crash causing injury and/or damage to property. Correction: Dealers will affect repairs. Note: Power steering and power braking system function would be unaffected in the event of such an occurrence.

Steering

2014193 28 May 2014

On certain vehicles, a fault in the Electric Power Steering (EPS) system could result in an immediate loss of power steering assist without warning to the driver. This would unexpectedly increase the steering effort force necessary to steer the vehicle at lower vehicle speeds, which could increase the risk of a crash causing injury and/or damage to property. Correction: Dealers will affect repairs as necessary and will reprogram the EPS controller with updated software. In the event that an EPS fault occurs, this updated software would allow for continued EPS function while displaying visual and audible warnings to the driver until the end of the drive cycle.

SOURCES

[1] Cardog identity register, decoded from the VIN
[2] Transport Canada recall database, listed for the model year
[3] NHTSA recall records (United States), listed for the model year
[4] Cardog market quote, same model year, 4 live listings, as of 26 Nov 2026
[5] Live public dealer listings on Cardog, as of 26 Nov 2026

STATEMENT OF SCOPE

This record is what public sources held about this vehicle when Cardog read it, each fact cited to its source. It read the VIN decode, Transport Canada's recall listing, NHTSA's recall records, Cardog's market quote and live public dealer listings. Recalls are listed for the model year, not checked against this VIN; the manufacturer confirms which apply. It is not a vehicle history or ownership report, and it carries no owner information.
