2 recalls listed by Transport Canada for this model year

Fuel system

2016528 25 Oct 2016

On certain vehicles, the thickness of the port wall of the Fuel Delivery Module (FDM) may be below specification and could result in the supply port cracking. If a crack were to develop in the vertical portion of the FDM fuel supply port, a fuel leak could occur. A fuel leak in the presence of an ignition source could result in a fire causing injury and/or property damage. Correction: Dealers will replace the FDM flange with a flange that has a redesigned fuel supply port.

Steering

2014193 28 May 2014

On certain vehicles, a fault in the Electric Power Steering (EPS) system could result in an immediate loss of power steering assist without warning to the driver. This would unexpectedly increase the steering effort force necessary to steer the vehicle at lower vehicle speeds, which could increase the risk of a crash causing injury and/or damage to property. Correction: Dealers will affect repairs as necessary and will reprogram the EPS controller with updated software. In the event that an EPS fault occurs, this updated software would allow for continued EPS function while displaying visual and audible warnings to the driver until the end of the drive cycle.
