Body	Pickup	Plant	Kansas City, Missouri, United States

§2 OBLIGATIONS [2]

cardog.app/tools/recalls/ford/f-150/2017

21 recalls listed by Transport Canada for this model year

Lights and instruments

2026286 10 Jun 2026

Issue: On certain vehicles, the recall repairs completed by a Ford dealer during recall 17C01 (Transport Canada recall no. 2017-040) may not have been done correctly. As a result, a second repair is required. On certain vehicles, a software problem could cause the instrument panel cluster screen not to display when the vehicle is started. As a result, you may not be able to see certain information about the vehicle, including the gear selection, speedometer, warning lights and malfunction tell-tales. Safety Risk: Warnings, gauges, gear selection and tell-tales indicators that don't display could increase the risk of a crash. Corrective Actions: Ford will notify owners by mail and advise you to take your vehicle to a dealership to update the instrument panel cluster software.

Powertrain

2026189 15 Apr 2026

Issue: On certain trucks, a software problem could cause the transmission to downshift suddenly to second gear. If this happens, there could be a loss of control. Note: This recall only affects trucks equipped with a 6-speed transmission. Safety Risk: A loss of control could increase the risk of a crash. Corrective Actions: Ford will notify owners by mail and advise you to take your truck to a dealership to update the powertrain control module software.

Brakes

2025198 11 Apr 2025

Issue: On certain vehicles, brake fluid could leak from the brake master cylinder into the brake booster. If this happens, there could be reduced braking. Note: This problem may cause a warning chime to sound and a red brake warning indicator to display in the instrument cluster. This recall only affects certain vehicles equipped with a 3.5 L Ecoboost engine. This is an expansion of recall 22S11 (Transport Canada recall no. 2022-115). Safety Risk: Reduced braking can cause extended stopping distances and increase the risk of a crash. Corrective Actions: Ford will notify owners by mail and advise you to take your vehicle to a dealership to replace the brake master cylinder. The dealer will also inspect and, if necessary, replace the brake booster.

Visual system

2024779 20 Dec 2024

Issue: On certain trucks, the windshield wiper linkage could corrode and seize. If this happens, the windshield wipers may not work. Safety Risk: Windshield wipers that don't work could reduce visibility and increase the risk of a crash. Corrective Actions: Ford will notify owners by mail and advise you to take your truck to a dealership to replace the windshield wiper linkage.

Brakes

2022115 14 Mar 2022

Issue: On certain trucks equipped with a 3.5 L Ecoboost engine, brake fluid could leak from the brake master cylinder into the brake booster. This can cause reduced front brake performance, and the driver may experience increased brake pedal travel and increased pedal effort. Full braking function remains in the rear wheel circuit. Note: Depending on the amount of brake fluid loss, the driver may hear a warning chime and see a red brake warning indicator in the instrument cluster. This is an expansion of Ford recall 20S31 (Transport Canada Recall No. 2020-252). Safety Risk: Reduced front brake performance can cause extended stopping distances and increase the risk of a crash. Corrective Actions: Ford will notify owners by mail and instruct you to take your truck to a dealer to replace the brake master cylinder. The dealer will also replace the brake booster if the brake master cylinder is leaking.

Brakes

2020252 8 Jun 2020

Issue: On certain trucks, brake fluid could leak from the brake master cylinder front wheel circuit into the brake booster. If this happens, the driver may experience increased brake pedal travel and increased pedal effort. This can cause reduced front brake performance. Full braking function remains in the rear wheel circuit. Note: Depending on the amount of brake fluid loss, the driver may hear a warning chime and see a red brake warning indicator in the instrument cluster. Safety Risk: Reduced front brake performance can cause extended stopping distances and increase the risk of a crash. Corrective Actions: Ford will notify owners by mail and instruct you to take your truck to a Ford or Lincoln dealer to replace the brake master cylinder.

SOURCES

[1] Cardog identity register, decoded from the VIN

[2] Transport Canada recall database, listed for the model year

[3] NHTSA recall records (United States), listed for the model year

[4] Cardog market quote, same configuration, 17 live listings, as of 26 Nov 2026

[5] Live public dealer listings on Cardog, as of 26 Nov 2026

STATEMENT OF SCOPE

This record is what public sources held about this vehicle when Cardog read it, each fact cited to its source. It read the VIN decode, Transport Canada's recall listing, NHTSA's recall records, Cardog's market quote and live public dealer listings. Recalls are listed for the model year, not checked against this VIN; the manufacturer confirms which apply. It is not a vehicle history or ownership report, and it carries no owner information.
