4 recalls listed by Transport Canada for this model year

Brakes	1991063	17 Apr 1991
On certain vehicles, the parking brake system may contain a non-functional parking brake adjuster. This may result in a gradual loss of parking brake effectiveness as the rear disc pads wear. As a result, the parking brake may not hold the vehicle on a steep incline. If the vehicle is parked with the transmission in neutral or a forward gear, the vehicle may roll away and result in personal injury or property damage. Correction: A new parking brake adjuster will be installed.		
Seats and restraints	1986002	7 Jan 1986
On certain vehicles, the front seat shoulder belt webbing may not retract into the retractor. This condition may be caused when the plastic spring cover becomes dislodged allowing the unwinding of the retractor spring. In the event of a vehicle crash in which belt restraint is required, failure of a front seat belt would increase the likelihood of injury to the wearer of the seat belt.		
Brakes	1985007	10 Jan 1985
On certain vehicles, the rear brake backing plates may develop a corrosion condition which could result in loss of rear brake fluid and loss of rear braking capabilities. This recall affects vehicles sold in the Maritime provinces only.		
Other	1983048	18 May 1983
On certain Camaro Z28, the hood inner and outer panels could separate. If separation were to occur while the car is in motion, the hood outer panel could fold back and block the driver's view. This could result in a vehicle crash without prior warning.

STATEMENT OF SCOPE

This record is what public sources held about this vehicle when Cardog read it, each fact cited to its source. It read the VIN decode, Transport Canada's recall listing, NHTSA's recall records, Cardog's market quote and live public dealer listings. Recalls are listed for the model year, not checked against this VIN; the manufacturer confirms which apply. It is not a vehicle history or ownership report, and it carries no owner information.
