3 recalls listed by Transport Canada for this model year

Electrical — 2023210 — 6 Apr 2023

Issue: On certain vehicles, an unused wiring harness for a rear HVAC blower motor, located in the left B-pillar area, could become damaged if exposed to moisture or contaminants. If this happens, the wires could short circuit. Note: This recall only affects cutaway chassis incomplete vehicles. Safety Risk: A short circuit can create the risk of a fire. Corrective Actions: General Motors will notify owners by mail and instruct you to bring your vehicle to a dealership to seal the wiring for the rear HVAC blower motor at the left B-pillar.

Electrical — 2021166 — 18 Mar 2021

Issue: On certain vehicles, the positive battery cable terminals could come into contact with the fuse block assembly. If this happens, there could be a short circuit. Safety Risk: A short circuit could create a fire risk. Corrective Actions: General Motors will notify owners by mail and instruct you to take your vehicle to a dealer to remove part of the anti-rotation tab on both positive battery cable terminals.

Tires — 2021103 — 26 Feb 2021

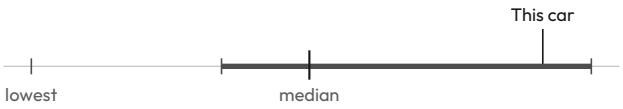

Issue: Certain vehicles were built with tires that may have been cured too long. As a result, the sidewall could crack or the tread and belts could separate. This could lead to a sudden loss of air pressure and could cause a tire failure. Note: This recall only affects certain Continental tires, with specific date codes and mold numbers. Safety Risk: A tire failure could cause a loss of control and increase the risk of a crash. Corrective Actions: General Motors will notify the owners by mail and instruct them to take the vehicle to a dealer to inspect and replace the tires, if necessary.
