2 recalls listed by Transport Canada for this model year

Lights and instruments

2023293 18 May 2023

Issue: On certain trucks, the backup lamps could be blocked and may not be visible. As a result, the trucks don't meet the requirements of the Canadian regulations. Note: This recall only affects trucks equipped with a pintle hook lowering bracket and feature code 01WPN, 01 WPS, or 01VAL. Safety Risk: Backup lamps that aren't visible could cause a person not to recognize that the vehicle is backing and increase the risk of a crash. Corrective Actions: Navistar will notify owners by mail and instruct you to take your truck to a dealership to install new tail stop/turn signal lamps with integrated backup lamps.

Electrical

2018043 22 Jan 2018

On certain vehicles equipped with an IOTA 50 amp transfer switch which is used to switch power between on-vehicle generator and shoreline power. Under certain heavy duty cycles, the lugs on the buss bar may loosen. Under high electrical loads, loose electrical connections could cause the circuit to overheat, which would increase the risk of fire causing injury and/or damage to property. Correction: Dealers will replace the IOTA switch.
