2 recalls listed by Transport Canada for this model year

Airbag 2020136 31 Mar 2020

Issue: On certain vehicles, the driver-front airbag inflator could be defective. This could cause the airbag to deploy with more force than normal. It could also cause the inflator to rupture. If the airbag inflator ruptures, fragments could be propelled toward the occupants or cause damage to the airbag and prevent it from inflating properly. Safety Risk: If the vehicle is involved in a crash where the airbag deploys, the airbag inflator could rupture and create a risk of injury or death. Corrective Actions: The company will notify owners by mail and instruct you to take your vehicle to a dealer to replace the driver-front airbag inflator or airbag module.

Seats and restraints 2014291 10 Jul 2014

On certain vehicles, bolt securing the seat belt retractors on 2nd, 3rd and 4th row seats may not have been tightened to specifications at time of assembly. This could cause the bolts to loosen over time, potentially resulting in separation of the seat belt retractor from the seat structure. This could increase the risk of injury and/or damage to property. Correction: Dealers will inspect and replace and/or tighten bolts as necessary.
