1 recall listed by Transport Canada for this model year

Fuel system

2016580 18 Nov 2016

On certain vehicles equipped with diesel engines, a temporary fuel tank breather tube cap may not have removed during assembly, and the tube may not have been correctly affixed to the bed rail. As a result, the fuel tank may not receive proper ventilation through the fuel tank breather tube and, in some instances, may deform. This condition could result in the fuel gauge, and the separate "distance to empty" meter, to both display inaccurately. If this occurs, the vehicle could possibly run out of fuel, which would cause the engine to stall without warning to the driver. Engine stalling could increase the risk of a crash causing injury and/or property damage. Correction: Dealers will inspect the fuel tank breather tube for proper routing and inspect for the absence of the temporary fuel tank breather tube cap to determine if a vehicle is affected. The temporary fuel tank breather tube cap will be removed and fuel tank, fuel sending unit, and/or fuel tank breather tube will be replaced as necessary.

STATEMENT OF SCOPE

This record is what public sources held about this vehicle when Cardog read it, each fact cited to its source. It read the VIN decode, Transport Canada's recall listing, NHTSA's recall records, Cardog's market quote and live public dealer listings. Recalls are listed for the model year, not checked against this VIN; the manufacturer confirms which apply. It is not a vehicle history or ownership report, and it carries no owner information.
