Lights and instruments

2019242 23 May 2019

Issue: Certain vehicles were built with headlights that may allow horizontal adjustment. This is not allowed under Canadian regulations. Safety Risk: Headlights that are not properly adjusted could cause reduced visibility or glare for oncoming drivers, and could increase the risk of a crash. Corrective Actions: The company will notify owners by mail and instruct them to take their vehicle to a dealer to inspect the headlights. A blocking cap will be installed on the horizontal adjusters as necessary.

Brakes

2017056 8 Feb 2017

On certain vehicles, defective brake line connections could cause brake fluid to leak from connection points. Over time, this would cause the brake fluid level in the master cylinder reservoir to become low, illuminating the low fluid level warning light. If the vehicle is operated in this condition, reduced brake function may result, extending stopping distances and increasing the risk of a crash causing injury and/or damage to property. Correction: Dealers will replace affected brake lines.
