Trim	R/T	Maker	FCA CANADA INC.
Body	Coupe	Plant	Brampton, Ontario, Canada

§2 OBLIGATIONS [2]

cardog.app/tools/recalls/dodge/challenger/2013

5 recalls listed by Transport Canada for this model year

Label	2024548 15 Aug 2024
Issue: On certain vehicles, the tire and loading information label does not list that there is no spare tire in both official languages. The label reads as "NONE" when it should read as "NONE / AUCUN". Canadian regulations require the information to be listed on the label in both English and French. Safety Risk: This error does not affect vehicle safety. Corrective Actions: This is not a recall. The company has corrected the tire and loading information label for all new vehicles.	
Airbag	2018027 11 Jan 2018
On certain vehicles, long-term exposure to high absolute humidity and temperature, combined with high temperature cycling, could eventually degrade the propellant contained in the passenger frontal airbag. This could cause the airbag to deploy with more force than normal. As a result, if the vehicle were involved in a collision that warrants airbag deployment, fragments could be propelled toward vehicle occupants, and the airbag assembly could be damaged, preventing proper function. These issues could increase the risk of injury. Correction: Dealers will replace the passenger frontal airbag inflator. Note: Canadian climate results in the propellant degrading slowly. The recall is being conducted as a precaution to address future risk, and is expected to replace airbag inflators before their function would be affected.	
Electrical	2017341 10 Jul 2017
On certain vehicles equipped with electro-hydraulic power steering ("EHPS"), the alternator may fail suddenly. This could result in the engine stalling, causing a loss of motive power which could increase the risk of a crash as well as disable various vehicle safety systems, and could also cause a fire. Both issues could increase the risk of injury and/or damage to property. Correction: Dealers will inspect the part number on the alternator, and will replace the alternator as necessary. Note: Only specific engine and alternator combinations are affected by this campaign.	

Electrical

2014446 9 Oct 2014

On certain vehicles equipped with 3.6L engines and 160 amp output alternators, the alternator may fail suddenly. This could result in the engine stalling, causing a loss of motive power which could increase the risk of a crash as well as disable various vehicle safety systems, and could also cause a fire. Both issues could increase the risk of injury and/or damage to property. Correction: Dealers will replace the alternator.

Electrical

2013091 22 Mar 2013

On certain 2013 Dodge Challenger vehicles equipped with V6 engines, an electrical short circuit between the starter motor cable assembly electrical terminal and the starter solenoid could result in a vehicle fire without warning, causing possible injury and/or property damage. Correction: Dealers will replace the starter motor electrical cable assembly.

Listed for the model year, not checked against your VIN. Dodge confirms which apply.

STATEMENT OF SCOPE

This record is what public sources held about this vehicle when Cardog read it, each fact cited to its source. It read the VIN decode, Transport Canada's recall listing, NHTSA's recall records, Cardog's market quote and live public dealer listings. Recalls are listed for the model year, not checked against this VIN; the manufacturer confirms which apply. It is not a vehicle history or ownership report, and it carries no owner information.
