3 recalls listed by Transport Canada for this model year

Fuel system

2014449 9 Oct 2014

On certain vehicles equipped with 6.7L diesel engines, an electrical connection at the fuel heater could overheat, potentially rendering the heater inoperative and causing a fuel leak and fuel odour. Fuel leakage, in the presence of an ignition source, could result in a fire causing injury and/or damage to property. Correction: Dealers will inspect the fuel heater, and replace it if required, as well as replace the fuel heater wiring harness electrical connector.

Steering

2013397 7 Nov 2013

On certain 2008–2012 Ram 2500 and 3500 4x4, Ram 3500 cab chassis, and 2008 Ram 1500 Mega Cab 4x4 vehicles, the left outer tie rod ball stud could fracture, potentially resulting in a loss of vehicle control and a crash causing injury and/or property damage. Correction: Dealers will install a redesigned left outer tie rod assembly. Note: This recall supersedes recall 2011-253 (L16). Vehicles that were repaired under the previous campaign will also need to be repaired under this campaign.

Steering

2013396 7 Nov 2013

Certain Ram 4500 and 5500 four wheel drive vehicles may experience a fracture of the ball stud on the left outer tie rod assembly, potentially resulting in a loss of vehicle control and a crash causing injury and/or property damage. Correction: As an interim repair, dealers will align the left tie rod end. Dealers will install a redesigned left outer tie rod assembly once parts are available. Note: This recall supersedes recall 2010-465 (K28). Vehicles that were repaired under the previous campaign will also need to be repaired under this campaign.
