2 recalls listed by Transport Canada for this model year

Other — 2013114 — 10 Apr 2013

On certain vehicles, the brake-shift interlock may not function properly at low temperatures. This could allow the transmission gear shift lever to be moved out of the PARK position without depressing the brake pedal. Depending which gear the driver selects, the vehicle could begin to move forward or backward immediately. This movement could result in property damage, or cause the vehicle to strike a bystander, potentially resulting in personal injury. Correction: Dealers will replace the gear shift assembly stopper.

Other — 2012220 — 19 Jul 2012

On certain vehicles, if the manual or power door lock is activated while an interior front door handle is being opened, the cable connecting the interior door handle to the door latch mechanism may become loose and move out of position. If this occurs, the door may not latch when closed. If it does latch, the door could then open unexpectedly once the door locks are operated. A door opening while the vehicle is underway could allow an unbelted occupant to fall from the vehicle and sustain personal injury. Correction: Dealers will replace the front door latch assemblies. In addition, the interior front door handles will be replaced on certain 2012 CR-V vehicles.

STATEMENT OF SCOPE

This record is what public sources held about this vehicle when Cardog read it, each fact cited to its source. It read the VIN decode, Transport Canada's recall listing, NHTSA's recall records, Cardog's market quote and live public dealer listings. Recalls are listed for the model year, not checked against this VIN; the manufacturer confirms which apply. It is not a vehicle history or ownership report, and it carries no owner information.
