2 recalls listed by Transport Canada for this model year

Suspension

2019281 11 Jun 2019

Issue: On certain vehicles, a buildup of dirt and mud could cause the rear suspension toe links to break. This could result in a sudden loss of vehicle stability. Note: This problem affects vehicles operated in Alberta, Saskatchewan and Manitoba. The unique soil properties in this region could make a toe link more likely to break. Safety Risk: A loss of stability could increase the risk of a crash. Corrective Actions: The company will notify owners by mail and instruct them to take their vehicle to a dealer to install improved rear suspension toe links.

Steering

2015224 27 May 2015

On certain vehicles, a fault in the Electric Power Steering (EPS) system could result in an immediate loss of power steering assist without warning to the driver. This would unexpectedly increase the steering effort force necessary to steer the vehicle at lower vehicle speeds, which could increase the risk of a crash causing injury and/or damage to property. Correction: Dealers will affect repairs as necessary and will reprogram the EPS controller with updated software. In the event that an EPS fault occurs, this updated software would allow for continued EPS function while displaying visual and audible warnings to the driver until the end of the drive cycle.
