3 recalls listed by Transport Canada for this model year

Airbag 2017566 17 Nov 2017

On certain vehicles, a bad connection at the side airbag sensor connector could cause a momentary communication loss from the side airbag sensor to the Airbag Control Unit (ACU). This would put the system in a backup state, lowering the impact threshold required for a side airbag deployment. If a door is being closed with force while the system is in this backup state, this could cause an unintended curtain airbag, seat-mounted side airbag and seat belt pretensioner deployment in a non-warranted (non-impact) situation, which would increase the risk of injury to occupants. Correction: Dealers will install a jumper harness and replace the side airbag sensor with a new one.

Powertrain 2015366 12 Aug 2015

On certain vehicles, the driver's foot could contact the edge of the center console lower trim panel, which could impede smooth accelerator pedal operation. The panel edge could also catch the driver's shoe, potentially resulting in a delay in the driver being able to shift their foot from the accelerator to the brake pedal. This could increase stopping distances, potentially resulting in a crash causing injury and/or damage to property. Correction: Dealers will modify the lower trim panel.

Airbag 2014559 10 Dec 2014

On certain vehicles, the driver's (frontal) airbag inflator was built with an incorrect part which could cause the inflator to rupture during a deployment. In a crash, this may cause airbag components to separate, which could allow fragments to be propelled toward vehicle occupants, increasing the risk of injury. Correction: Dealers will replace the driver's (frontal) airbag inflator.
