3 recalls listed by Transport Canada for this model year

Airbag	2008127 16 Apr 2008
On certain New Beetle convertible, a frontal crash sensor for the advanced (dual-stage) airbag system may fail. If this occurs, the airbag indicator light will illuminate, and the fallback algorithm will ensure the frontal airbags deploy if needed. However, in low-severity frontal impacts, the front airbags may deploy more forcefully than designed, increasing the risk of injury to out-of-position front seat occupants. Correction: Dealers will inspect and, if necessary, replace the airbag frontal crash sensors.	
Lights and instruments	2006122 24 May 2006
On certain Golf, GTI, Jetta, Jetta wagon, New Beetle, New Beetle convertible, Passat and Passat wagon, the brake lamp switch may malfunction. If this happens, the brake lamps could become inoperative; or could come on and stay on, even though the vehicle is parked. Correction: Dealers will replace the brake lamp switch with a newly revised version. This action includes vehicles previously affected by Transport Canada recall 03-184 and 04-075. The switch installed during this prior repair may not function properly. Note: parts available December 2006.	
Fuel system	2004435 13 Dec 2004
On certain vehicle equipped with TDI-PD (Pumpe-Düse) engines, the high-pressure diesel pumps were produced with improper fasteners. In rare cases, one of these improper fasteners may yield due to repeated cyclic loading and allow diesel fuel to escape from the high-pressure pump. Diesel fuel in the presence of an ignition source may lead to a fire. Additionally, due to the quantity of fuel that may be released, there is a crash risk posed to vehicles traveling behind the subject vehicle. Correction: Dealers will install a replacement diesel pump kit.
