Model	R-Class	Drive	AWD
Trim	R320 BLUETEC 4-MATIC	Maker	MERCEDES-BENZ OF NORTH AMERICA, INC.
Body	Sport Utility Vehicle	Plant	Vance, United States

§2 OBLIGATIONS [2]

cardog.app/tools/recalls/mercedes-benz/r-class/2011

4 recalls listed by Transport Canada for this model year

Brakes

2022237 6 May 2022

Issue: On certain vehicles, corrosion could cause the brake booster to fail. If this happens, there may be an increase in brake pedal effort and increase the distance needed to stop the vehicle. In rare cases of severe corrosion, the brake booster could separate completely and cause a loss of brakes. Safety Risk: A loss of brakes can increase the risk of a crash. Corrective Actions: Mercedes-Benz advises you to stop driving your vehicle immediately. The company will notify owners by mail and instruct you to contact a local Mercedes-Benz dealership to arrange for towing and an inspection. The dealer will remove the rubber brake booster sleeve and determine whether the vehicle is safe to drive or if it can't be driven and a parts replacement is necessary. Also, depending on the results of the inspection, you may need to return within two years for a re-inspection.

Airbag

2016158 13 Apr 2016

On certain vehicles, the driver frontal airbag inflator could produce excessive internal pressure during airbag deployment. Increased pressure may cause the inflator to rupture, which could allow fragments to be propelled toward vehicle occupants, increasing the risk of injury. This could also damage the airbag module, which could prevent proper deployment. Failure of the airbag to fully deploy during a crash (where deployment is warranted) could increase the risk of personal injury to the seat occupant. Correction: Dealers will replace the front driver air bag module.

Fuel system

2011359 4 Oct 2011

On certain vehicles equipped with a diesel engine, the fuel filter assembly may develop a leak from the fuel heater o-ring seal. Diesel fuel spilt on the roadway could endanger other road users by making the roadway unexpectedly slippery. This could ultimately result in a vehicle crash causing property damage and/or personal injury. Correction: Dealers will inspect and, if necessary, replace the diesel fuel filter assembly.

Fuel system

2010375 29 Oct 2010

On certain GL350, ML350 and R350 BlueTEC vehicles, the diesel fuel filter may have an O-ring that was not properly lubricated during assembly, which could lead to a diesel fuel leakage. As a result, diesel fuel may be deposited on the road and create a risk a crash. Correction: Dealers will replace the fuel filter.

Listed for the model year, not checked against your VIN. Mercedes-Benz confirms which apply.

SOURCES

- | | |
|---|--|
| [1] Cardog identity register, decoded from the VIN | [3] Cardog market quote, same model year, 2 live listings, as of 28 Oct 2026 |
| [2] Transport Canada recall database, listed for the model year | [4] Live public dealer listings on Cardog, as of 28 Oct 2026 |

STATEMENT OF SCOPE

This record is what public sources held about this vehicle when Cardog read it, each fact cited to its source. It read the VIN decode, Transport Canada's recall listing, Cardog's market quote and live public dealer listings. Recalls are listed for the model year, not checked against this VIN; the manufacturer confirms which apply. It is not a vehicle history or ownership report, and it carries no owner information.
