2 recalls listed by Transport Canada for this model year

Other **2010012** 22 Jan 2010

On certain vehicles, accelerator pedal movement may become rough, slow to return, or the pedal may stick in a depressed position. This could result in a loss of throttle control and a vehicle crash, causing property damage, personal injury or death. Correction: Dealers will install a steel reinforcement bar to the accelerator pedal assembly. With this reinforcement in place, the excess friction that can cause the pedal to stick is eliminated.

Other **2009290** 7 Oct 2009

On certain vehicles, the accelerator pedal may become stuck in the wide open position due to an unsecured or incompatible driver's floor mat. A stuck open accelerator pedal may result in very high vehicle speeds and make it difficult to stop the vehicle, which could cause a crash, serious injury or death. Correction: Dealers will reconfigure the shape of the accelerator pedal. Certain models will also have the shape of the floor underneath the accelerator pedal modified and/or a brake override system installed.
