3 recalls listed by Transport Canada for this model year

Engine

2022095 2 Mar 2022

Issue: On certain vehicles equipped with an N52 or N52K 6-cylinder engine, a manufacturing problem could cause the PCV valve heater (blow-by heater) to short circuit and overheat. Note: This replaces Transport Canada recalls 2017-470 and 2019-170. Only vehicles equipped with an N52 or N52K engine require this repair. Safety Risk: An overheated engine PCV valve heater could create the risk of a fire, even while the vehicle is parked and turned off. Corrective Actions: BMW will notify owners by mail and instruct you to take your vehicle to a dealer to install a wire harness repair kit. BMW recommends that you should park your vehicle outdoors until the recall repairs have been completed.

Engine

2017470 28 Sep 2017

On certain vehicles equipped with the N52 6-cylinder engine, an electrical short could occur in the PCV valve heater due to manufacturing irregularities. If this occurs, the surrounding plastics could overheat, melt and potentially cause a fire, which could increase the risk of injury and/or damage to property. Correction: Dealers will replace the PCV valve heater.

Airbag

2013238 5 Jul 2013

On certain vehicles, the front passenger seat occupant detection mat can fatigue over time. As a result, the passenger airbag could deactivate, illuminating the airbag warning lamp and the passenger airbag ON/OFF lamp. Failure of the passenger airbag to deploy during a crash (where deployment is warranted) could increase the risk of personal injury to the seat occupant. Correction: Vehicles will receive special extended warranty coverage of 10 years from first registration. Under this special coverage program, vehicles which experience this condition will have the occupant detection mat replaced.
