1 recall listed by Transport Canada for this model year

Airbag

2019323 28 Jun 2019

Issue: On certain vehicles, long-term exposure to high absolute humidity and temperature, combined with high temperature cycling, may eventually degrade the propellant contained in the airbag. This could cause the airbag to deploy with more force than normal. If the airbag inflator ruptures, fragments could be propelled toward vehicle occupants or cause damage to the airbag assembly, preventing its proper function. Note: This is a new recall campaign that includes vehicles that had an airbag inflator replaced under a previous recall or had a replacement airbag installed. The previous recall provided an interim (short-term) repair. Interim repair parts must be replaced with the final repair parts provided in this recall. Safety Risk: If the vehicle is involved in a crash requiring an airbag deployment, the airbag inflator could rupture and create a risk of injury. Corrective Action: Owners will be notified by mail and instructed to take their vehicle to a dealer to replace the driver and/or passenger-front airbag inflator. Note: The Canadian climate results in the propellant degrading slowly. This recall is being conducted as a precaution to address future risk. It is expected that all airbag inflators will be replaced before their function would be affected.
